

ALPACA AI TRADING AGENTS HACKATHON

Autonomous options trading with an inspectable record

Dynamic discovery | Independent AI analysis | Deterministic risk | Alpaca paper execution

Fast enough to act. Constrained enough to explain.

DISCOVER

Search beyond a fixed ticker list and freeze the evidence before analysis.

REASON

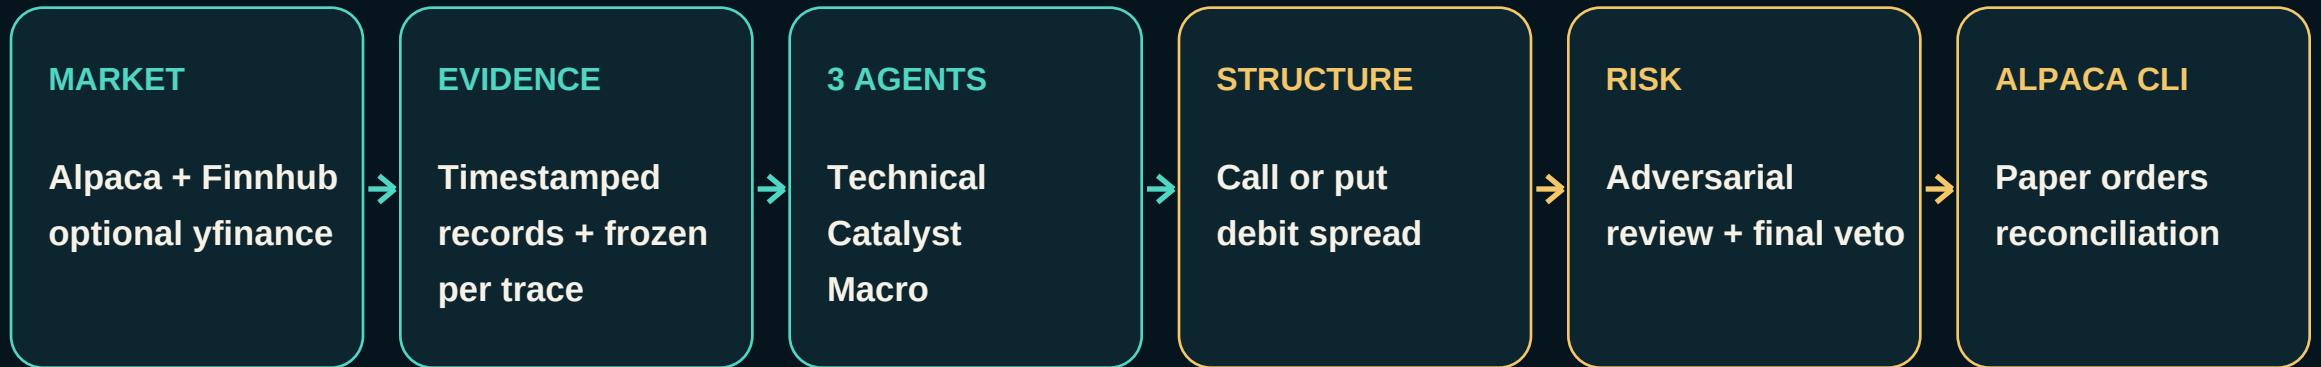

Three agents examine the same evidence independently and may abstain.

CONTROL

Deterministic code owns sizing, authorization, execution, and exits.

The agent can propose a trade. It cannot bypass the rules that protect the account.

Execution authority is isolated at the end.

Only a signed, immutable authorization reaches the credentialed gateway.

The dashboard receives no broker credentials and cannot place, cancel, or modify orders.

The agents share evidence - not conclusions.

01

TECHNICAL

Completed bars, VWAP, opening range, short-term trend, and volume confirmation.

02

CATALYST

Source-attributed news and unusual activity, judged for intraday persistence.

03

MACRO

Supplied broad-market evidence only; neutral when the bundle contains no signal.

Strict JSON | exact evidence IDs | schema validation | abstention allowed

Unsupported, stale, contradictory, or malformed output cannot become an order.

AI proposes. Deterministic code controls capital.

- Known maximum loss before authorization
- No naked options; whole-contract sizing
- Fresh quotes and completed bars only
- Liquidity, spread, DTE, and reward-risk checks
- Exposure, concentration, buying power, and drawdown limits
- Duplicate prevention and deterministic client order IDs

EXECUTION BOUNDARY

Pinned Alpaca CLI

Paper endpoint only

Limit multi-leg orders

Reconcile fills + restarts

No raw broker command reaches AI.

Every decision is inspectable.

AUTONOMOUS OPTIONS AGENT / DECISION AUDIT

Taygos818's Alpaca Hackathon Dashboard

Trace evidence, independent agent findings, deterministic risk vetoes, paper orders, positions, and exits. Select any record for the complete redacted decision trail.

OPPORTUNITY RANKING

MRVL

rank 41

INDEPENDENT AGENTS

No analysis crossed the data-quality gate.

CHOSEN STRUCTURES

No liquid structure passed.

DETERMINISTIC RISK

No proposal reached portfolio risk.

PAPER ORDERS

No broker transaction; this trace ended before submission.

POSITIONS AND EXITS

No reconciled position.

EVIDENCE PROVENANCE

No evidence was frozen.

WHAT THE RESULT EXPOSED

- Catalyst attribution was too noisy.
- Retries consumed budget without adding enough signal.
- Wide option spreads punished aggressive execution.
- Sizing increased before positive expectancy was proven.
- A close-reconciliation defect left nine spreads open.

Autonomy without an audit trail is just a black box.
